Summary

Full-stack Developer with 4+ years of experience building scalable web applications using React, Next.js, and TypeScript. Skilled in architecting cloud-native solutions and deploying production systems on AWS with a focus on reliability and security. Experienced in real-time features, third-party integrations, and SaaS development with clean, maintainable code. Passionate about performance optimization and delivering features that elevate user experience and drive business impact.

Technical Skills

- **Languages:** TypeScript, JavaScript (ES6+), Python, SQL, HTML5, CSS3/SCSS
- **Frontend Ecosystem:** ReactJS, Next.js, Tailwind CSS, Hookstate/Redux, DnD Kit, React Grid Layout, Tiptap, react-email, Recharts, NextAuth.js
- **Backend & APIs:** Node.js, Express.js, FastAPI, REST APIs, WebSockets, Server-Sent Events (SSE)
- **Databases & Data Pipelines:** PostgreSQL, MongoDB, Redis, ClickHouse, Apache Kafka, SQLAlchemy 2.0
- **Cloud & Infrastructure:** AWS (S3, EC2, CloudFront), Docker Compose, GitHub Actions, Git, Locust, PyTest
- **Applied AI Integration:** RAG Pipelines, Local LLMs (Ollama), Direct APIs, ChromaDB

Work Experience

Software Developer – ProStack360 Pvt Ltd, Chennai, TN

Jun 2023 – Jun 2026

- **AI-Driven Codebase Migration:** Architected and deployed an internal AI documentation pipeline using Python to accelerate a major codebase migration. Recursively mapped over 250 React component trees and generated comprehensive Markdown documentation for legacy systems, saving an estimated 300+ hours of manual engineering review during system refactoring.
- **Privacy-First Local AI & Tuning:** Deployed open-weight LLMs locally via Ollama to ensure zero leakage of proprietary source code. Actively managed model selection and parameter tuning, balancing hardware compute constraints against the parameter scale required for high-fidelity code analysis.
- **Advanced Prompt Engineering:** Engineered strict, deterministic system prompts forcing the LLM to act as a senior technical architect. Automatically extracted global/local state flows, URL routing logic, and potential XSS vulnerabilities directly from source files.
- **Spearheaded Frontend Architecture & Delivery:** Acted as the sole frontend authority, architecting a modular CRM platform from scratch using React, TypeScript, and SCSS. Partnered directly with Product Management and UI/UX designers to translate requirements into scalable component architectures.
- **Consumer-Facing Features & Prototyping:** Architected and deployed highly responsive, consumer-facing public web forms supporting anonymous data collection with strict schema validation and CAPTCHA security.
- **Data Analytics Integration:** Built interactive data visualization dashboards using Recharts to track KPIs, enabling product teams to dig into user data, validate feature adoption, and define product roadmaps.
- **Negotiated Technical Contracts:** Collaborated with backend engineers to define REST and WebSocket API contracts, successfully integrating real-time collaboration updates that heavily reduce system latency and sync issues.
- **Optimized Cloud Delivery:** Spearheaded frontend performance optimization techniques, utilizing AWS CloudFront for CDN distribution and implementing efficient rendering strategies in Next.js to reduce client-side load times by ~30%.
- **Engineered Complex UI Systems:** Built a robust, Gmail-like in-product email editor utilizing the Tiptap rich-text ecosystem, complete with auto-draft saving, signature management, and export functionality.

- Collected, analyzed, and maintained project data from reports, databases, and user feedback to support business decision-making.
- Monitored project progress, timelines, and key performance indicators (KPIs), preparing reports and dashboards for stakeholders.
- Created data summaries, charts, and visual reports using tools such as Excel to communicate project performance insights.

Projects

High-Throughput Financial Ledger Engine - [Repo](#)

- **System Performance:** Engineered an async ledger engine capable of processing 152.8 requests per second (RPS) and handling 160,000+ total transactions with a 0.00% system failure rate under heavy resource saturation testing.
- **Concurrency & Data Integrity:** Eliminated race conditions and account overdrafts during multi-device concurrent updates by implementing strict pessimistic row-locking (SELECT FOR UPDATE) within SQLAlchemy 2.0.
- **Distributed Systems Architecture:** Resolved distributed dual-write risks by implementing the Transactional Outbox Pattern to atomically bind core financial mutations and outbound pipeline messages within a single PostgreSQL ACID transaction.
- **Zero-Contention Data Pipelines:** Architected a decoupled pipeline using the CQRS pattern. Utilized Apache Kafka as a buffer and built an async consumer to micro-batch 1,000-record windows into a ClickHouse data warehouse, completely removing analytical read overhead from the live production database.

Easy Forms Platform | [Repo](#) | [Demo](#)

- **Full-Stack Implementation:** Developed a comprehensive form builder and analytics platform allowing users to create, publish, and analyze real-time data using Next.js, TypeScript, and MongoDB.
- **Real-Time Architecture:** Integrated Server-Sent Events (SSE) and WebSockets for live notifications and collaborative form editing.
- **Secure Authentication & Access:** Implemented OAuth, email verification, and secure password reset flows utilizing NextAuth.js and strict API route protections.

Education

B.E in Mechanical Engineering - Anna University, Mohamed Sathak Engineering Collage

Aug 2017 – May 2021

- GPA: 8.1/10 ([Transcript](#))

Personal Details

Language known: English, Tamil

DOB: 27/12/1998

Nationality: Indian

Marital status: Single

Declaration

I hereby declare that, to the best of my knowledge and belief, all the information provided above is true and accurate.

Place: Dubai

Yours Truly
Hameed Hussain
